Scenario:

You are a single mother of 2 (a 14 and 16-year-old) and work full time to support your family. You find it difficult to manage the time between your family and work especially since Covid has made certain errands more difficulty. You would like to be able to have easy access to correct information since many stores' hours have changed since the outbreak.

Task 1:

Find out if Walmart is open right now?

Task 2:

Your household just ran out of toilet paper and you remember that you need to run out and buy some, find out if Walmart has that item in-stock?

Task 3:

You see that hand sanitizer is currently out-of-stock. Add hand sanitizer to your following items because you would like to know where that is in stock more easily.

Notes:

What changes you should make to your application:

Adie: Add a in/out stock button to items, color coordinate so green is open and red is not, make home screen available from store and item page.

Jeff: Add stock button, change following button to be more clear, more interesting login screen

Gina: Item search specific tab, include address in search screen, color coordinate items

What you need to keep the same for your application:

Adie: Availability to search both stores and items, following access in profile, safety rating

Jeff: Organization of the store page, back arrows in pages, list of in-stock items

Gina: List of items in store page, simplicity of create account page, Name of app
